

MATTRESS FOR BEDDING, AND METHOD AND APPARATUS FOR MANUFACTURING THE SAME

Abstract of the Disclosure

5 An air mattress includes top sheet and bottom sheet which are disposed to be
opposing. The mattress has a side sheet coupled to the top and bottom sheets. The
mattress has plural threads coupled to the top and bottom sheets so that they are spaced
each other with a certain distance when the air is inflated. The mattress has a foamed
body filled in the inside of the mattress so that the foamed body is penetrated by the
threads.
